

CarboTech

The activated carbon people

THE ADVANTAGES ARE CLEAR!

Activated carbons for treating landfill leachate

Removing high organic loads: Landfill leachate contains high organic loads that can be a hazard to groundwater, among other things. Both in landfill leachate treatment and in groundwater remediation, an adsorptive treatment stage using activated carbons from CarboTech gives you an excellent platform for staying safely and easily within maximum permitted limits.

Optimised cleaning with help from our experts: Where individual pollutants or groups of pollutants are to be removed from leachate, our experts can fine-tune the adsorption process for you by means of preliminary tests taking into account the special properties of the waste water and selecting the right activated carbons for your specific application.

Particularly economical and sustainable: With adsorption ratios of over 50%, our activated carbon solutions will be especially economical for your business. Thanks to our in-house reactivation process, it is also possible to use the activated carbon several times over, making our proposition even more sustainable.

CarboTech is one of Europe's leading suppliers of powdered, granulated and extruded activated carbons. The company operates integrated production plants for the manufacturing, processing and packaging of customised activated carbons, activated cokes and Carbon Molecular Sieves.

Quality: Because we work uncompromisingly with our customers' interests at heart, our top priority is to keep on improving operational performance. Everyone at CarboTech expects the same high standards of themselves and of our products and services.

Experience: CarboTech combines experience in production, application and process engineering in catering for conventional requirements and delivering truly innovative services. The practical, committed advice provided by our experts is something our customers greatly appreciate.

Cost-effectiveness: The use of our special activated carbon products makes permanently reliable and cost-effective solutions possible.

We also offer in-depth expert advice on all aspects of selecting and using our products. **We look forward to hearing from you!**
