

CarboTech
The activated carbon people

THE ADVANTAGES ARE CLEAR!

Activated carbons for flue and exhaust gases

Purifying air of toxic substances: Wherever materials are burned, exhaust fumes and flue gases are produced. Power plants, waste incineration, and industrial processes such as glass production emit a wide range of pollutants. CarboTech's activated carbons adsorb a broad range of pollutants and play a valuable role in cleaning exhaust gases, protecting people and environment.

Thorough cleaning to stay within legal limits: Substances in the air are subjected to strict legal limits to which companies must adhere. Nitrous oxides (NO_x) pose a particular problem, as they contribute to the depletion of ozone, having a negative impact on the climate and causing acid rain and smog. CarboTech offers a wide range of solutions here, enabling even older systems to comply with the latest, usually stricter, limits.

Carbon Catalysts for problem cases: When it comes to complex applications, our carbon catalysts can be a gift from the heavens. These pelletised activated carbons with catalytic properties require no impregnation. They are produced by a special activation process patented by CarboTech using a multi-stage fluidised bed reactor.

CarboTech is one of Europe's leading suppliers of powdered, granulated, and extruded activated carbons. The company operates an integrated production plant for the manufacturing, processing, and packaging of customised activated carbons, activated cokes, and carbon molecular sieves.

Quality: Since CarboTech works consistently with its customers' interests at heart, its top priority is to constantly achieve the operational excellence. High expectations for product and service quality are a matter of pride for every employee.

Experience: CarboTech combines experiences from production, application, and process engineering. From a strategic point of view, it has traditional requirements as much in its sights as it does innovative services. The commitment of experts with precise knowledge of in-field conditions is highly valued by our customers.

Cost-effectiveness: The use of CarboTech's special activated carbon products makes permanently reliable and cost-effective solutions possible.

Furthermore CarboTech offers thorough and expert advice on all aspects regarding the selection and application of their products.

The CarboTech experts look forward to hearing from you.
